software, which support the concept of the installation, “Humanistic Reality”, as a software development kit, which consists of projection position collection, physics law, force display, graphics, sound, and artificial intelligence.

As a long-term vision, we hope that people, especially children, understand the importance of Humanistic Reality like face-to-face communications, sharing of time, sharing of experiences and keeping of usual living spaces. Hopefully, children who had experienced our “Tangible Installation” invent natural new relationship between computer and human in the future.

In other words, we believe that the experience become "the compasses" which tell the direction of the new continent to the explorer in the world of the future interaction.

Acknowledgements

We would like to thank Luo Yan Lin, Jeong Sung Ju and Lykke Silfwerbrand for checking this document. For system development, we also thank to Masaharu Inoue, Jeong Seungzoo, Shinichiro Tagami, Atsushi Toyama, Nobuaki Fujii, Takuya Hirai, Naoki Matsumoto, and Takefumi Miura.
